Faculty Access 9

Student Access 9

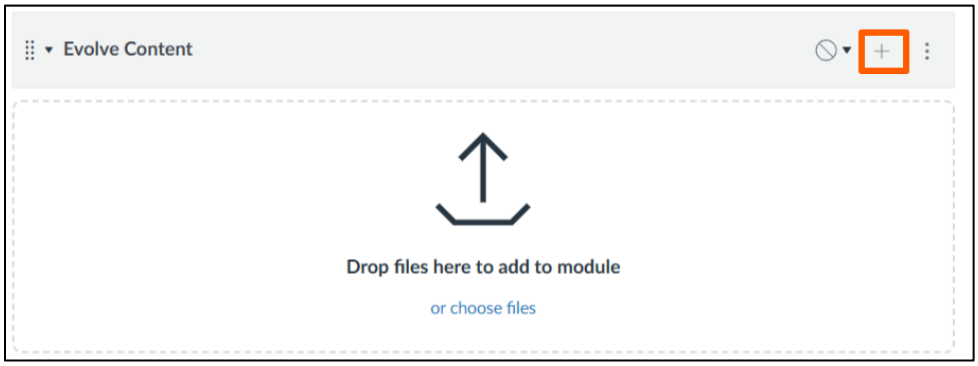

NOTE: *Ensure an Evolve 1.1 or 1.3 external tool is installed. If the LMS does not show these tools, you will need to contact your Sales rep and Customer Success Manager to have this tool installed by our team and your LMS administrator. Depending on the timeline of your course, this may cause a semester delay in connecting your materials.*

Adding an LTI link to Evolve content

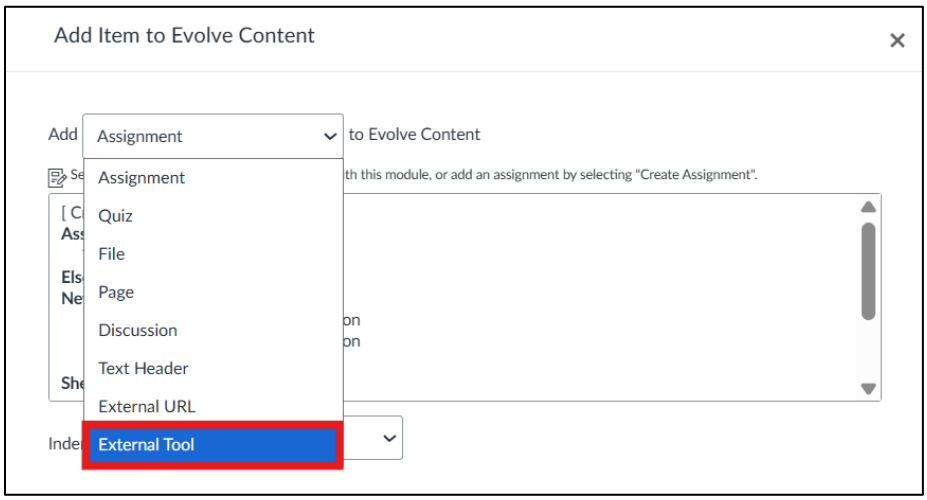

1. Navigate to your Canvas course and create a new module or use a pre-existing module to to add the tool link

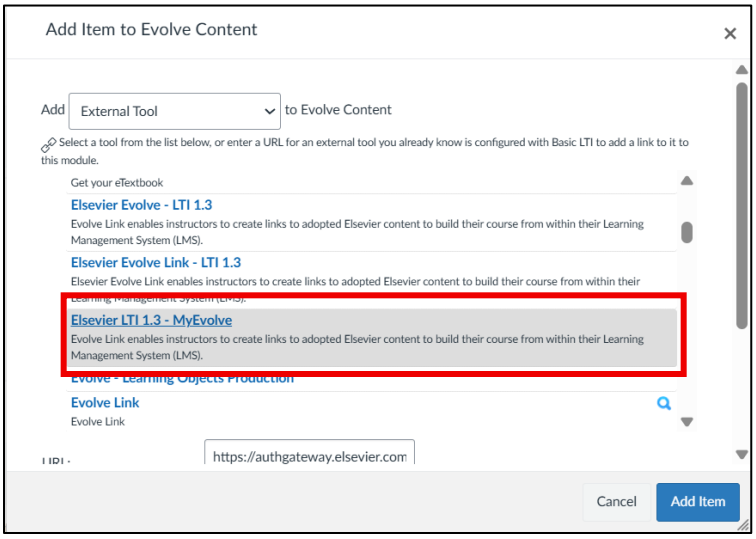

2. Click the “plus” button to add content

3. Select “External Tool” from the dropdown menu

4. Select the Evolve 1.1 or 1.3 link in the list

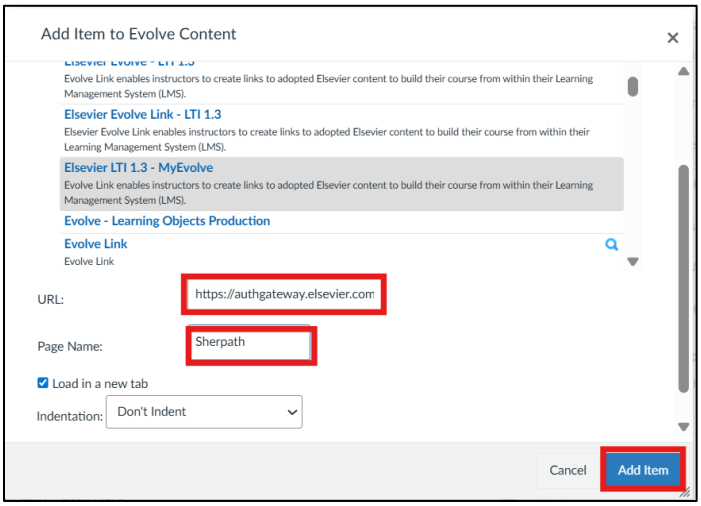

NOTE: *The name of this link will vary based on the name given by your LMS admin. Please contact your admin if you are unsure of the correct link to click. If another pop-up screen shows for Evolve, exit that screen to return to your LMS screen.*

5. Name your link and add the URL from the below table, adding the specific ISBN for your product at the end of the link. Check for trailing spaces.

Standard Product Link Formats

Product	URL Link
Sherpath/Sherpath Vantage	https://authgateway.elsevier.com/tools/sherpath-evolution?custom_collection_id=ISBN
Elsevier Adaptive Quiz (EAQ)	https://authgateway.elsevier.com/tools/eaq?custom_collection_id=ISBN
HESI Prep Suite	https://authgateway.elsevier.com/tools/hesils?custom_collection_id=ISBN
Elsevier Assessment Builder (EAB)	https://authgateway.elsevier.com/tools/sherpath-evolution?custom_collection_id=ISBN

Your link should now show up in your module

NOTE: *If you need to link a product not listed above, contact your Customer Success Manager as we will want to ensure the product's LTI functionality meets your school's needs.*

NOTE: *if you do not have this, stop the process and contact your CSM immediately for this URL link. You CANNOT link an already created Instructor-Led Evolve ID course. The LTI link will create a new instance of the course. If you already have an instructor-led course with students enrolled, do not create an external tool link and please contact your CSM.*

NOTE: *You cannot use the Evolve LTI link tool to link directly to a VitalSource ebook. If you wish to do so, your LMS admin will need to install a Vitalsource LTI Tool*Your link should now show up in your Course Content module

Testing your LTI Link

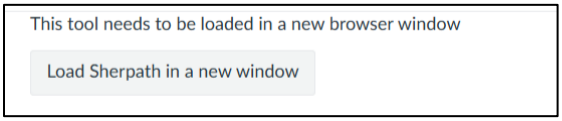

To test your LTI link, you must be added to the course as an Instructor and logged in as such. LMS admins attempting to test the link without impersonating an instructor role will receive a 404 error: Membership container not found

NOTE: *Without specific parameters added by your LMS administrator when setting up the external tool, you cannot link to individual assignments ("deep linking")*

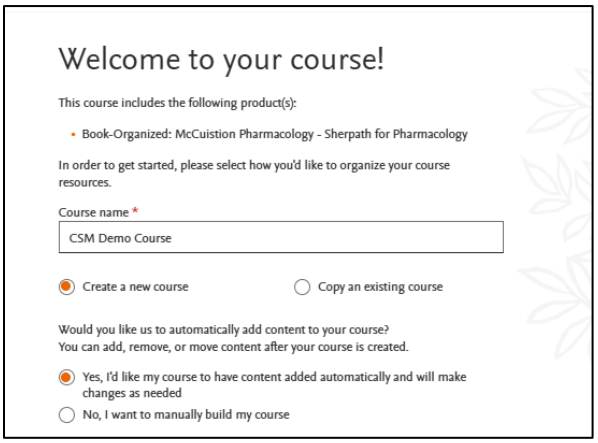

1. Click the link you have created in the module

2. Canvas will open a new tab. Click the "Load in a new window" button

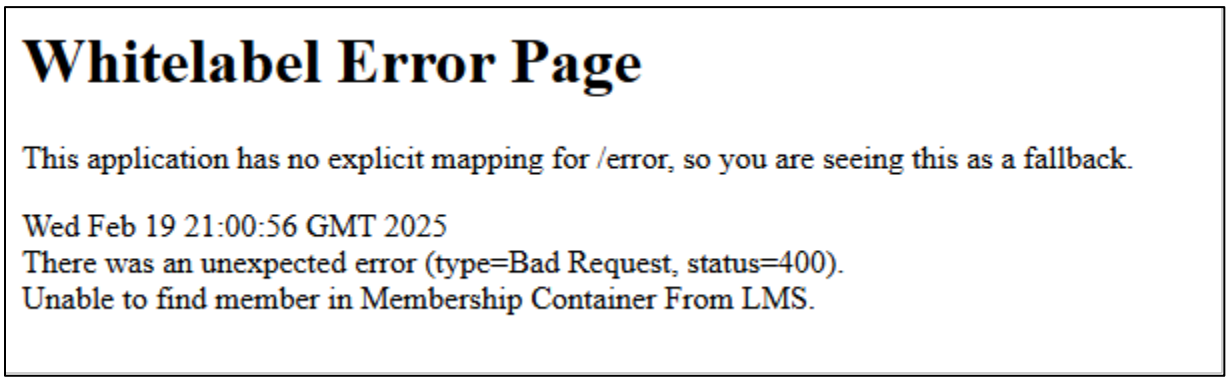

3. Your course should open to a setup screen similar to the Sherpath one displayed below

Common Errors and How to Fix them

White Label Error: 400 – Unable to Find member in Membership Container in LMS

- Cause: User is not enrolled in the LMS course as a faculty. This frequently occurs when you are working with someone with Admin permissions since that role is not mapped.

- Solution: Ensure the user is marked as a faculty (if you are working with a faculty member) or, if you are testing with an Admin – the admin needs to either create/log in as a faculty OR impersonate a faculty user.

While Label Error: 500 – This application has no explicIt mapping for/error, so you are seeing this as a fallback

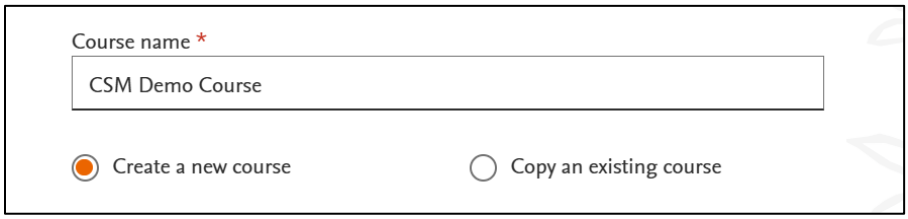

- Cause: URL does not exist or the ISBN could have been entered incorrectly/be invalid, (such as an extra space added, copying the Outlook link, or trying to link to an ebook

- Solution: Verify the URL is correct and launched with the appropriate external tool; if that does not fix it, contact our Support team.

Setting up your Course and Checking for Grade Pass back

Many Evolve products connected through the external tool link will automatically create assignments in the assignments tab and pass back grades once the set due date has passed. Your tool will automatically import assignments for Sherpath, Shadow Health (1.1 courseware), HESI Prep Suite, Elsevier Assessment Builder, EAQ, and Clinical Skills NG.

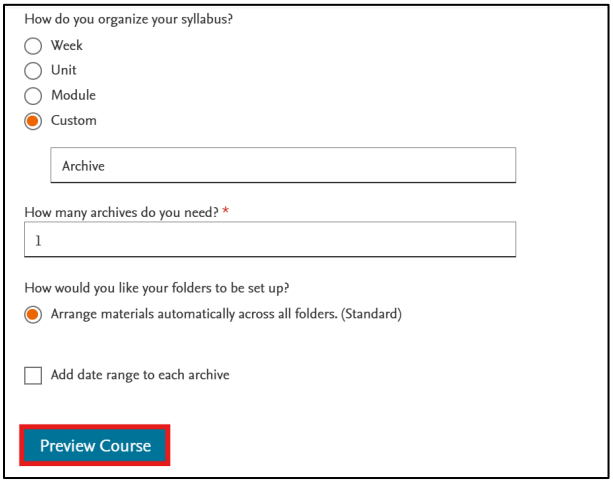

1. Select either “create new course,” or, if you are copying from a previously created and set up instructor led course, “copy from an existing course” radio button. Skip to step 6 if the latter, ensuring that at least one assignment copied has a set due date and is marked as a graded assignment

NOTE: *If you are copying a previous LMS hosted course, please refer to the Before you Copy your Sherpath Course video and/or PDF (which applies to most LTI connected Evolve products) before proceeding*

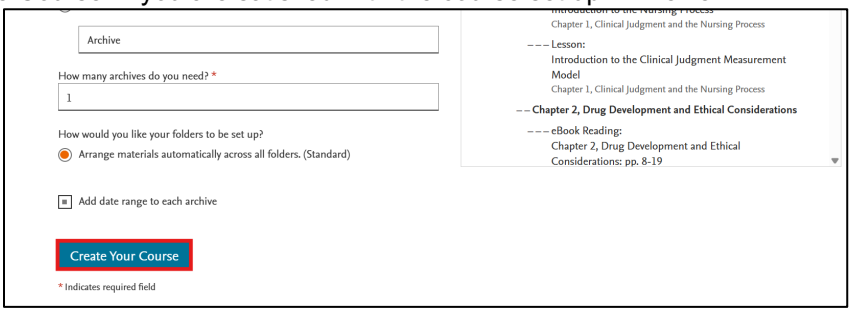

NOTE: *You must be enrolled as an instructor for any courses from which you wish to copy. If you are not enrolled, these will not show up in the list to copy*

2. Leave the next few options on by default (recommended) and then choose how you’d like to arrange your folders. Then click “Preview Course”

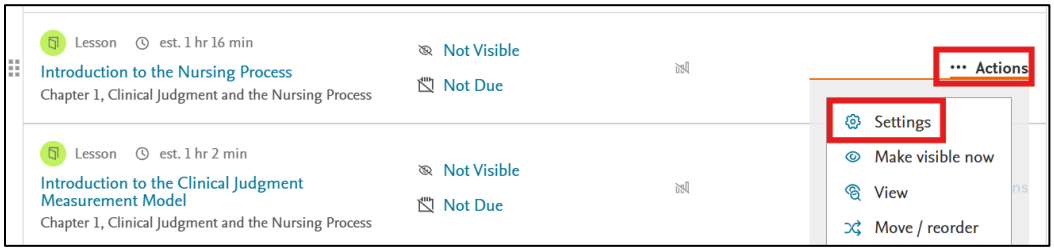

NOTE: *As seen in the above screenshot, If this is the first time you are setting up a courseware course, we recommend creating one “Archive” folder and then building the course manually by moving chapter assignments to their proper folders/weeks/modules. Some product set-up pages may look different and contain different options. For more information on Setting up courses, refer to the product training page*

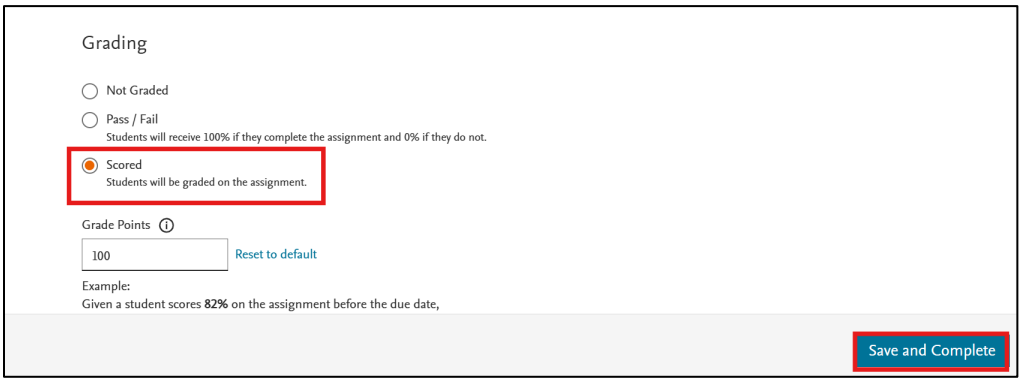

3. Click “Create Course” if you are satisfied with the course set up in Preview

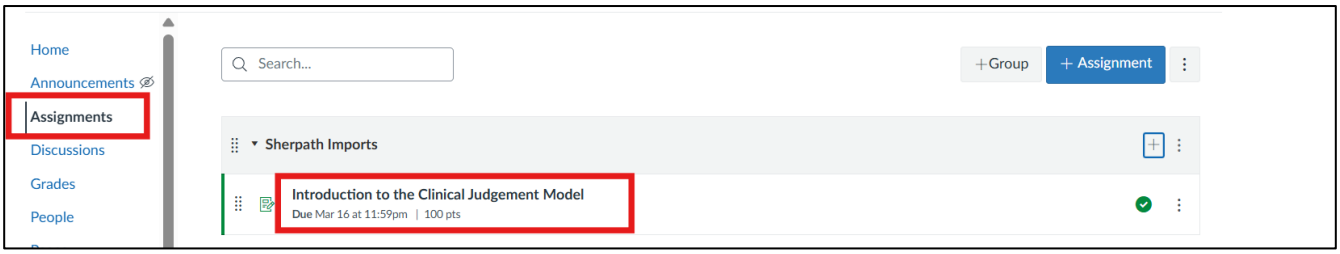

4. Arrange your course to fit your syllabus and then click on the “actions” 3 dots next to an assignment. From the menu click “Settings”

5. Scroll all the way down to the bottom of the page and click the “Scored” radio button, then click the “Save and Complete” button

6. Return to the Canvas course and ensure that the assignment has populated in your Assignments tab in the top category.

NOTE: *If you do not see assignments that have been given a due date and are marked as scored in your assignments tab, there may be an issue with the grade pass back connection. Contact your LMS admin and CSM if this occurs.*

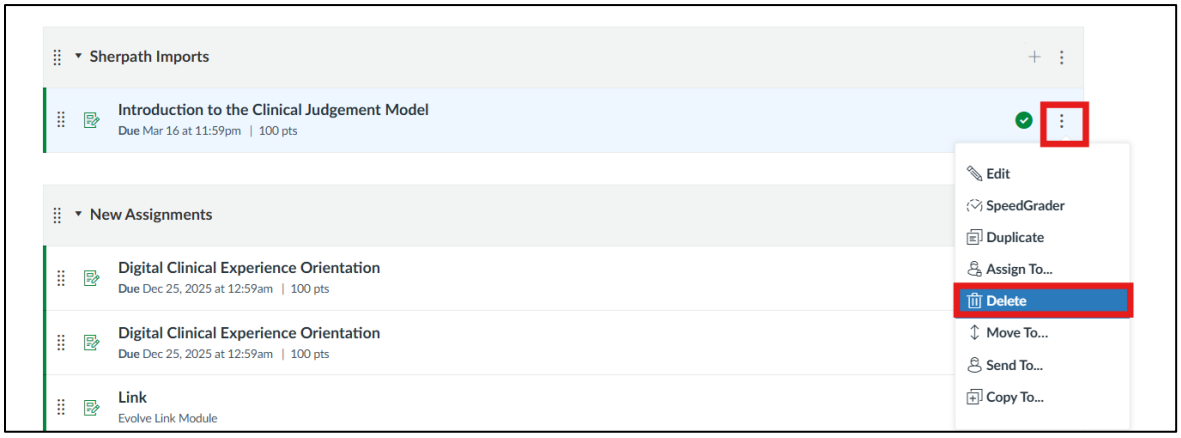

NOTE: *Any changes to the assignment name and settings should be made directly in the Evolve product. Changing any settings (including the name of the assignment) within the LMS can break the link to the assignment and erase grade pass back capabilities*

NOTE: *While you may be able to link other products (such as Evolve resources or Online Courses) to an LMS, only a very select few of these product types will support grade pass back. We strongly encourage instead to download and upload test banks instead of connecting these products using LTI as their functionality is limited. For advice on specific products, contact your Customer Success Manager*

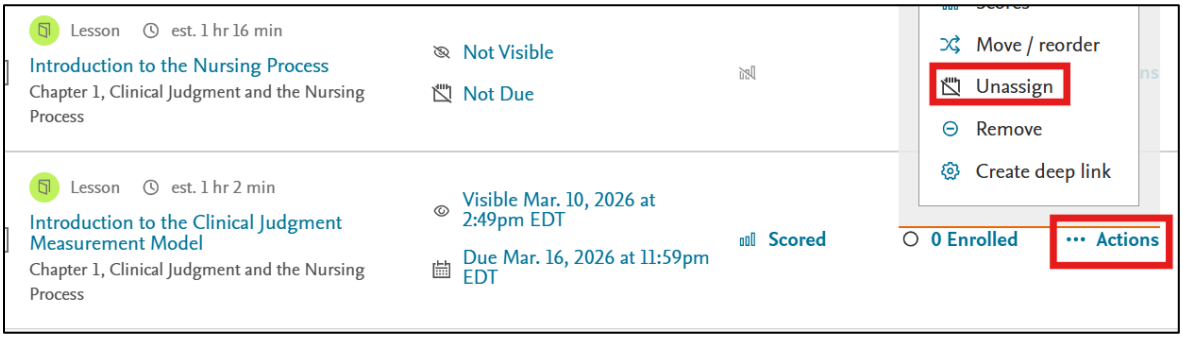

Deleting Assignments in the LMS Gradebook

If you need to delete a grade pass back test assignment or delete an accidental assignment, follow the below instructions.

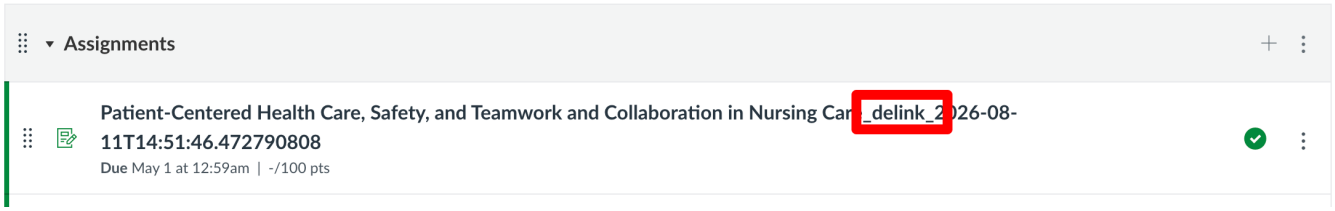

1. Click on the 3 dots next to the assignment and select delete to remove it from your Assignments tab and gradebook. This will remove the grade pass back functionality for the assignment.

2. Click back into the Sherpath course, click “Actions” and then unassign.

NOTE: *If you delete the assignment from the Evolve content first, you may see the following on your assignments. If you see this, proceed to delete the assignment from your Canvas Assignments page. This is why we recommend deleting it from Canvas first.*

Faculty Access

Faculty should now only and always access this Evolve content through this external tool link in their LMS. Faculty should make any changes to assignments within the evolve product itself -these will be reflected in assignment tabs on their LMS

Student Access

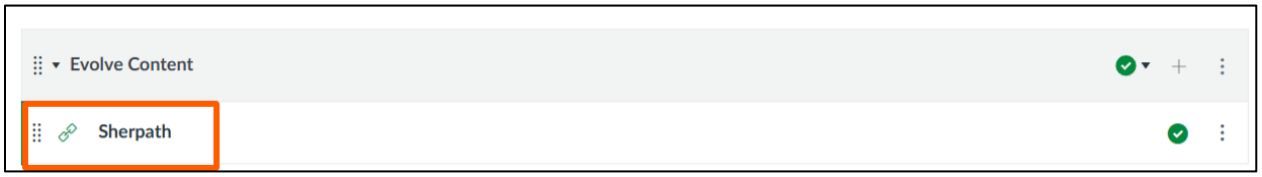

Students should only access linked Evolve content through Canvas and should not need nor have an instructor ID.

NOTE: *If students have purchased a package access code from the bookstore or Elsevier, they will need to create an Evolve account and redeem this code* before *clicking into the links in the LMS so they do not encounter the individual product paywalls.*

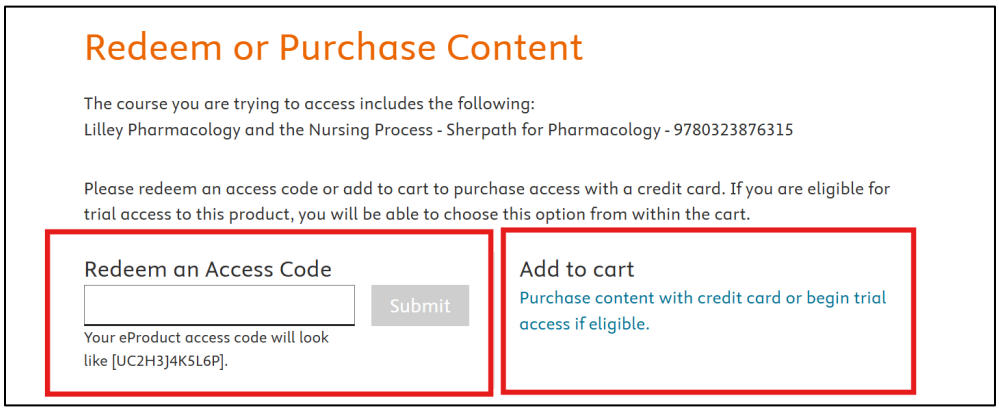

1. Ensure the module and external tool link is available for students (once you have tested for errors) by clicking the “publish” icon

2. Click on the Sherpath link and load in a new window as faculty did above

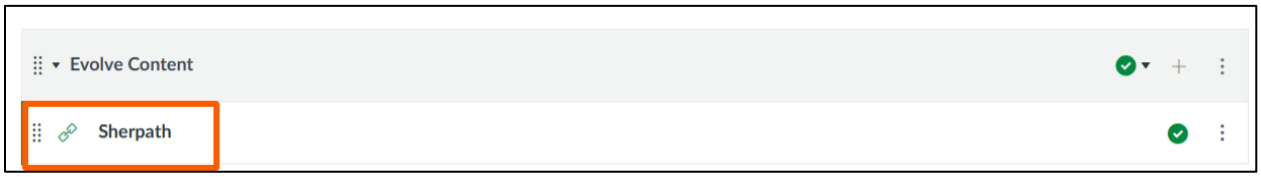

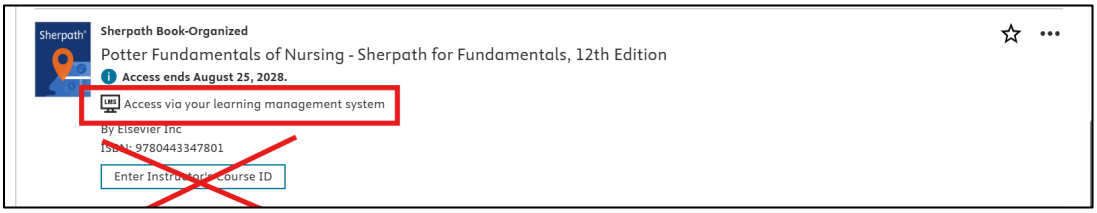

3. Pay for the product by either choosing enter and access code or Pay with a credit card

NOTE: *If a student has already redeemed an access code or purchased the product/package, they should not encounter this payment screen. If they do encounter this screen, this likely means that their Evolve account email address does not match their LMS email address. Please direct students to contact student support if they run into issues.*

4. Exit the Evolve content screen, return to the LMS module and click the link again. They DO NOT have to enter an instructor ID or access code

5. Access the Evolve content through the LMS link any time to complete course assignments and review course content
